## Success Story: Maricopa Skill Center

Maricopa Skill Center, a division of GateWay Community College, is located in Phoenix, AZ. It provides vocational training programs in business, technology, healthcare and trades. The hands-on training center employs small class sizes and self-paced learning to achieve industry-identified skills. To meet the needs of the community the campus began renovation of its existing building in 2011. The remodel incorporates an additional building with state-of-the-art green technology classrooms and a modern design.

Symbiote products, specified by mercatUS International in Phoenix, were chosen for its ease of configuration, mobile design and heavy-duty construction. UltraFrame Laboratory Furniture, along with ESD surfaces and chairs, were installed in the Technology Program PC Networking Room. Adjustable Height WorkTables, with 4x8 foot galvanized tops, enhanced the Construction Trade Program area. The stretcher-centered design enables students to work on both sides of the table and quickly move it where it's needed.
